Digital Photo Table

Digital camera users have been waiting a long time for a purpose made photo table to suit photographing small objects.

Shooting difficult items such as jewellery, small electrical components, coins, stamps etc. has suddenly become so much easier.

The BRP Digital Photo Table has been specifically designed and engineered for just this task.

Utilising two, fully adjustable 18W daylight corrected lamp heads, the table provides an unmatched ability to illuminate your subject from any angle, giving you amazing detail control.

Your digital camera is mounted onto a ball and socket head which, in turn, is fitted to an adjustable arm with a quick release adaptor.

The smooth curve of the white plastic back panel is firmly retained into the rear frame using magnets and the whole frame can be quickly and easily collapsed for easy storage.

Available exclusively in the UK from

Bob Rigby
